EMERGENCY PROCEDURES

ENGINE FIRE DURING START (results from over priming)

Starter.....CONTINUE TO CRANK ENGINE
 Throttle1700 RPM (if engine starts)
 If engine start is unsuccessful, continue cranking for 2 or 3 minutes with throttle full open.
 MixtureIDLE CUT-OFF
 Fuel Selector.....OFF
 Aircraft..... ABANDON IF FIRE CONTINUES

Smother flames with fire extinguisher, seat cushion, blanket, or loose dirt. If practical, remove carburetor air filter if it's ablaze.

Make a thorough inspection of fire damage, and repair or replace damaged components before conducting flight.

ENGINE POWER LOSS DURING TAKE-OFF (Instructor Technique)

If sufficient runway remains for a normal landing land straight ahead.
 If insufficient runway remains, maintain a safe airspeed and make only shallow turns to avoid obstructions.
 If you have gained sufficient altitude to attempt a restart, proceed with next checklist.

ENGINE FAILURE DURING FLIGHT (restart) (Instructor Technique)

 Ignition Switch "L" then "R" back to BOTH
 Transponder**7700**
 Radio**121.5 MAYDAY****

* If engine failure was caused by fuel exhaustion, power will not be regained after tanks are switched until empty fuel lines are filled, which may require up to ten seconds.

** When calling on 121.5 say your last known position number of people on board, how much fuel, and what kind of emergency. It is recorded and they will be able to find you and take care of you faster.

EMERGENCY LANDING WITHOUT ENGINE POWER

 Land as soon as Practical

ENGINE FIRE IN FLIGHT

MixtureCUT—OFF
 Fuel Selector.....OFF

 Glide Establish.....**120 MPH**
 Cabin Heat.....OFF / CLOSED

If fire is not extinguished, increase glide speed in an attempt to find an airspeed that will provide incombustible mixture.
